Pain and Pain Management - 3

Health Professionals across all settings are actively involved in helping thousands of patients each year with effective pain management. This is a crucial element of care provision – via accurate diagnoses and early interventions, professionals can reduce the severity of pain and the risk of chronic conditions, as well as greatly improve the quality of life and overall mental and physical health of the patient. We have provided a list of relevant articles from MA Healthcare journals dealing with this area, thereby providing your staff with research, information and tips that will support both their work and the care of their patients
